

Tyler Nguyen

Senior Frontend Engineer

React | Vue | Performance | Accessibility | Design Systems

nguyentyl341@gmail.com · 770-634-9979 · Atlanta, GA (Open to Remote)

Experience

Senior Software Engineer - Macys Technology | Atlanta GA

April 2022 - Present

- Led the re-platforming of a high-traffic customer-facing web application, modernizing frontend architecture and UX to drive **32% YoY growth in Registry revenue**.
- Collaborated with Product and Design to identify customer journey friction, forming hypotheses backed by behavioral analytics (FullStory, funnel analysis) and shipping iterative A/B experiments to measurably improve conversion.
- Owned frontend performance as a product lever, reducing LCP by 65% (to <2.2s) through dynamic component loading and bundle optimization — improving Core Web Vitals, SEO visibility, and page speed.
- Drove design system adoption within a Vue.js web application, building reusable components and establishing patterns that accelerated feature delivery, while leading WCAG-compliant accessibility implementation that reduced audit findings from 20 to 0.
- Provided technical leadership for 16 engineers — setting architectural direction, code quality standards, and delivery strategy — while maintaining technical documentation and adopting AI-assisted tooling (Gemini Code Assist) to accelerate team velocity.

Mid-level Software Engineer - CodeMettle

March 2019 – March 2022

- Re-architected a complex Electron + React + TypeScript web application, improving reliability and modularity, contributing to a **20% increase in user retention**.
- Built scalable, component-driven UI systems for complex multi-step workflows, solving problems at the intersection of usability and maintainable frontend architecture.
- Established test-driven development practices (Jest + React Testing Library), raising coverage to 80%+ and improving confidence in rapid feature iteration.

Software Engineer - Mercury Systems

June 2017 – February 2019

- Contributed to safety-critical software requiring strict reliability and fault tolerance; built a Python automation framework integrating with JAMA's REST API to manage thousands of requirements, improving traceability and reducing operational risk.

Skills

- **Frontend:** React, Vue.js, Next.js, Pinia, TypeScript, JavaScript (ES6+), Node.js, Webpack, Vite, Figma
- **Architecture & Product Craft:** Component Architecture, Design Systems, Performance Optimization, Accessibility (WCAG), State Management Patterns, , RESTful APIs, GCP, Agile Project Development, Gemini Code Assist
- **Observability & Analytics:** Adobe Analytics, Frontend Instrumentation, A/B Experimentation, Core Web Vitals
- **Quality & Delivery:** Jest, React Testing Library, Vue Testing Library, End-to-End Testing, User Acceptance Testing, Technical Documentation, CI/CD (GitLab)

Education

Georgia Institute of Technology, Atlanta GA

Bachelor of Science in Computer Engineering
